FIVE READY-TO-USE SKILLS, WITH THE FULL SKILL.MD FILES

Claude Skills *for Sales*

Five skills that teach Claude to do common sales jobs your way, every time. Copy the SKILL.md files, add your own reference files, and test them on real accounts.

What a skill is

A skill is a folder that teaches Claude how to do one job your way. At its heart is a SKILL.md file: a short name and description that tell Claude when to use it, and instructions it follows when it does. You can add reference files, like your ICP or voice samples, and scripts. Claude only loads a skill when the task needs it, so you can have many without cluttering every conversation.

How to set one up

1. Make a folder named after the skill, for example **account-research**.
2. Add SKILL.md with the name, a description of when to use it, and the steps.
3. Add your reference files: your ICP, stages, voice rules or examples. Keep each one short.
4. Add it to Claude, then test it on five real accounts. Tighten the steps wherever the output misses.

The five skills

Account research brief	A one-page brief on any account before a call or outbound, with every fact sourced.
Call prep	Turns CRM notes and the account brief into an agenda, questions and the exit criterion for this call.
Follow-up in my voice	Writes follow-ups that sound like you, from your own rules and real examples.
Weekly pipeline review	Prepares a one-page review from two pipeline exports, so the meeting is about decisions.
ICP fit check	Scores any account or list against your written ICP the same way every time.

Tip. The description decides when Claude uses a skill. Say what the skill does and the words people use when they need it.

SKILL · ACCOUNT-RESEARCH

Account research brief

A one-page brief on any account before a call or outbound, with every fact sourced.

Files: SKILL.md · reference/icp.md

```
---
name: account-research
description: Research a company before a sales call or outbound and return a one-page brief with sources. Use when
asked to research, prep or look into an account.
---

# Account research brief

## Steps
1. Read reference/icp.md for who we sell to and the signals that matter.
2. Research the company: what they sell, size, funding, leadership, recent news,
   hiring, and the tech they use. Keep the source for every fact.
3. Score fit against the ICP from 1 to 5 and say why in one line.
4. Write three hypotheses about the problems we could solve, each linked to a fact.
5. Suggest the two people to contact first and why.

## Output
A one-page brief with these headings: Snapshot, Why now, Fit, Hypotheses,
Who to contact, Sources.

## Rules
- Every fact needs a source link. If you can't find one, say "not found".
- Never guess revenue. Use "not public" if it isn't.
- Keep it to one page.
```

Make it yours: reference/icp.md

```
# Our ICP
Who: [B2B SaaS, 50 to 500 staff, Series A to C]
Problem: [the problem we solve, in the customer's words]
Trigger to buy now: [new funding, new market, new sales leader, ...]
Who signs: [role]   Who uses it: [roles]
Signals in public data: [hiring for X, uses tool Y, app store presence, ...]
Say no to: [too small, wrong market, no budget owner, ...]
```

Try it. “Research [company] before my call on Thursday.” Test it on five real accounts, then tighten the steps wherever the output misses.

SKILL · CALL-PREP

Call prep

Turns CRM notes and the account brief into an agenda, questions and the exit criterion for this call.

Files: SKILL.md · reference/stages.md

```
---
name: call-prep
description: Prepare for a sales call from the CRM notes, emails and account brief. Use when asked to prep a call,
meeting or demo.
---

# Call prep

## Steps
1. Find the deal stage and read its exit criteria in reference/stages.md.
2. Read the last three touches: notes, emails and any call summary.
3. Write the one outcome this call must achieve to meet the exit criterion.
4. Write a 30-minute agenda with timings.
5. Write five questions that close the biggest gaps in what we know.
6. List the two objections most likely to come up, with what a good answer covers.

## Output
Outcome, Agenda, Questions, Likely objections, What we still don't know.

## Rules
- Questions must be open and about their business, not our product.
- If something in the notes contradicts something else, flag it.
```

Make it yours: reference/stages.md

```
# Stages and exit criteria
1. Discovery: problem confirmed in their words, impact sized, decider named.
2. Solution: they agree our approach fits, success criteria written down.
3. Proposal: price shared, decision process and date confirmed.
4. Commit: legal and procurement steps listed with owners and dates.
5. Closed won: signed, kick-off booked.
```

Try it. “Prep my call with [company] tomorrow at 10.” Test it on five real accounts, then tighten the steps wherever the output misses.

SKILL · FOLLOW-UP-IN-MY-VOICE

Follow-up in my voice

Writes follow-ups that sound like you, from your own rules and real examples.

Files: SKILL.md · reference/voice.md · reference/examples.md

```
---
name: follow-up-in-my-voice
description: Write a follow-up email after a sales call in my voice. Use when asked to write a follow-up, recap or
next-steps email.
---

# Follow-up in my voice

## Steps
1. Read reference/voice.md for my rules and reference/examples.md for five real
   follow-ups I sent.
2. From the call notes, pull out what they said matters, what we agreed, and the
   next step with a date.
3. Write the email: thank them for one specific thing, recap in three bullets,
   confirm the next step and owner.
4. Check it against every rule in voice.md and fix anything that fails.

## Rules
- Under 120 words.
- Use their words for their problem, not ours.
- Never "I hope you're well". Sign off the way voice.md says.
- Only include what was actually said on the call.
```

Make it yours: reference/voice.md

```
# How I write
- Short sentences. British spelling. No em dashes.
- Open with something specific from the call, never "I hope you're well".
- First email to someone new: sign off "Thanks, [name]". After that: [initials].
- Never promise what we didn't agree.
- One clear next step with a date.
```

Try it. “Write the follow-up from today's call with [name]. Notes below.” Test it on five real accounts, then tighten the steps wherever the output misses.

SKILL · PIPELINE-REVIEW

Weekly pipeline review

Prepares a one-page review from two pipeline exports, so the meeting is about decisions.

Files: SKILL.md · reference/stages.md

```
---
name: pipeline-review
description: Prepare the weekly pipeline review from this week's and last week's CRM exports. Use when asked about
the pipeline, forecast or deal review.
---

# Weekly pipeline review

## Steps
1. Read the stage exit criteria in reference/stages.md.
2. Compare the two exports. List deals that moved stage, slipped, changed value
   or had no activity for 14 days.
3. For each stalled deal, name the missing exit criterion and one question for
   the owner.
4. Compare forecast with weighted pipeline and name the three deals that decide
   the number.
5. Flag deals whose stage doesn't match their evidence.

## Output
One page: Changes, Stalled deals, Forecast call, Stage mismatches.

## Rules
- Facts from the exports only.
- Never change CRM data.
```

Make it yours: reference/stages.md

```
# Stages and exit criteria
Use the same file as call-prep, so the review and the reps
judge deals against the same standard.
Add your weighting per stage, e.g. Discovery 10%, Solution 25%,
Proposal 50%, Commit 80%.
```

Try it. “Prepare this week's pipeline review. Exports attached.” Test it on five real accounts, then tighten the steps wherever the output misses.

SKILL · ICP-FIT-CHECK

ICP fit check

Scores any account or list against your written ICP the same way every time.

Files: SKILL.md · reference/icp.md · reference/rubric.md

```
---
name: icp-fit-check
description: Score one account or a list of accounts against our ICP and say who to prioritise and who to say no
to. Use when asked if a company is a fit, or to prioritise a list.
---

# ICP fit check

## Steps
1. Read reference/icp.md and the scoring rubric in reference/rubric.md.
2. For each account, find the facts the rubric needs. Keep sources.
3. Score each criterion, then the total, exactly as the rubric says.
4. Put each account in one bucket: prioritise, nurture, or say no.

## Output
A table: account | score | bucket | the deciding facts | sources.

## Rules
- If a fact the rubric needs is missing, score that criterion 0 and say so.
- Apply the rubric the same way every time. Don't adjust for brand names.
```

Make it yours: reference/rubric.md

```
# Fit rubric (0 to 3 each, 15 max)
Size: 0 under [x] staff, 3 for [range]
Market: 0 outside [markets], 3 for [core market]
Trigger: 0 none found, 3 [strong trigger] in the last 90 days
Buyer: 0 no clear owner, 3 [role] in place
Tech: 0 incompatible, 3 uses [tool we plug into]
Buckets: 11+ prioritise, 6 to 10 nurture, under 6 say no
```

Try it. “Score this list of 40 accounts against our ICP.” Test it on five real accounts, then tighten the steps wherever the output misses.

WANT THESE BUILT INTO YOUR ENGINE?

Trained on your data, checked *to your standard.*

In a Commercial Systems Build I set up agents like these on your own deals, calls and CRM, and only switch them on once they send what your best people would send.
